2025					0.00000	12.90000
2026	???	???	???	???	2.70000	15.60000

If all other levies are the same next year...
???

You could represent this as a **\$2.70** increase from the FY2025 levy rate....although people will only just have learned about their FY25 tax bill just prior to the election as they get their new tax bill around September.

Or, you could represent the increase as "it will be approx **\$0.84** higher than what you just paid this most recent fiscal year FY2024"

I see schools discuss it either of the above ways. Both are correct; just depends on how you want to talk about it, and you want to make sure that everyone that is talking about it (including me) is talking the same way.
